

Coatings for Industrial floors:

Refurbishment of car workshop and car wash area

Applied coating in the car workshop

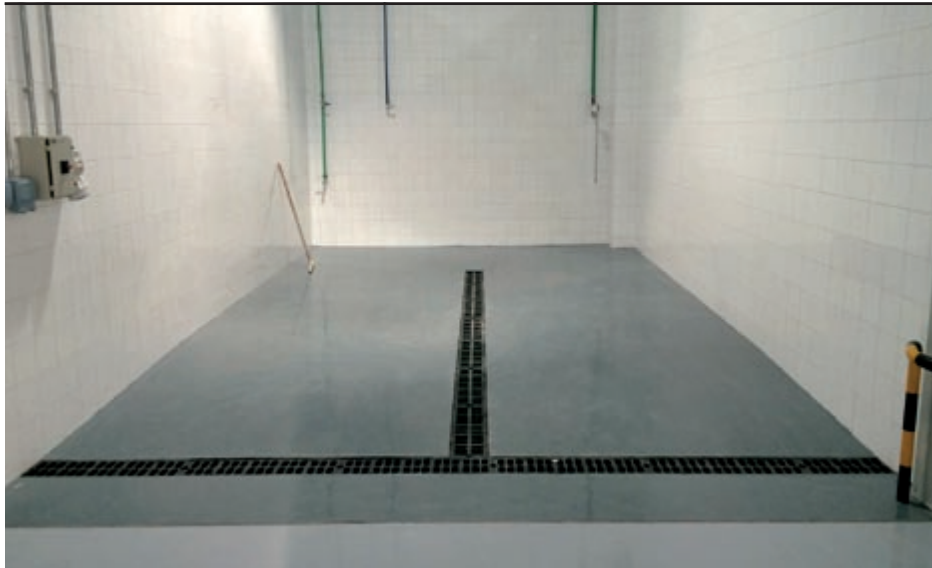

Bahrain: A local Toyota workshop got a new, high-quality flooring for their repair and wash area with Ceramic Polymer's coating systems. The product requirements were focused on high chemical resistance as well as high mechanical loads.

Beside remains of fuel and motor oil the floor is exposed to constant wetness and acidic detergents within the wash area. An excellent chemical resistance of the coating products is essential for this application case. Furthermore, an extraordinary high pressure and abrasion resistance is required due to heavy concentrated loads. In comparison to standard flooring systems our Ceramic Polymer products reach a relevant higher operation time.

Technical Data:

Area:	500 qm
Product requirements:	High mechanical load, high chemical resistance
Application of the coating:	Kanoo Paint Center, Bahrain
Coating product:	CP-SYNTHOFLOOR BETA 8016 (Primer) + CP-SYNTHOFLOOR 8463 (Topcoat)

Applied coating in the wash area

Our flooring systems CP-SYNTHOFLOOR BETA 8016 (primer) and CP-SYNTHOFLOOR 8463 as self leveling topcoat are applied simply by conventional hand tools. Both systems are solvent-free, hence the application procedure is lot less harmful.

Our Products:

- CP-SYNTHOFLOOR BETA 8016
- CP-SYNTHOFLOOR 8463

Product Advantages of CP-SYNTHOFLOOR BETA 8016 + CP-SYNTHOFLOOR 8463

- solvent-free
- excellent chemical resistance
- high abrasion resistance
- very high compressive strength
- fast curing times
- hard-wearing surface, easy cleaning
- simple application by rake

Do you need floor coatings for demanding areas?

Whether antibacterial, skid-proof, temperature ore pressure resistant systems – our consulting team assists you competently and targeted.
